Hiring Manager & Internship Selection Committee,
Division of Administration – Office of Human Resources
New Jersey Department of the Treasury
50 West State Street, 8th Floor, PO Box 211
Trenton, NJ 08625

Dear Hiring Manager and Selection Committee,

As an Honors Computer Science and Information Technology & Informatics (ITI) student at Rutgers University, I am writing to express my strong interest in the New Jersey Department of the Treasury's Student Internship Program. While my primary focus lies in **Information Technology**, my background is heavily complemented by practical experience in operational analytics, resource management, and cross-functional end-user support. I am eager to contribute to Treasury's enterprise infrastructure while supporting multi-disciplinary initiatives across **Finance, Business, and Human Resources**. I would be thrilled to bring my technical expertise, analytical mindset, and collaborative approach to your Information Technology team, or other departments as needed.

Currently serving as an L2 Helpdesk Specialist for Rutgers University's Office of Information Technology, I deliver field support and Tier-2 escalation resolution across hardware, networking, and enterprise software for over 2,000 university faculty and all Rutgers students. Utilizing enterprise tools like ServiceNow, Bomgar, and Icinga, I proactively diagnose infrastructure bottlenecks, maintain system reliability, and safeguard operational continuity. Additionally, as System Administrator for the Rutgers Cybersecurity Club, I designed and managed virtual machine clusters on Proxmox and configured pfSense firewalls to support large-scale network environments, including hosting a CTF competition for over 710 teams. This has helped me build a strong foundation in **Information Technology** principles, including systems administration, network security, and enterprise software management.

Beyond core IT administration, my experience naturally intersects with broader organizational management. In my Tier-2 support and Makerspace roles, I regularly translate complex technical concepts into actionable steps for non-technical staff, mentor Tier-1 consultants on ticket escalation protocols, and advise over users on workflow improvements; meanwhile, mirroring core principles of talent development and customer care. On the Business and Finance front, my BoomFrame application leveraged async data pipelines to evaluate live market pricing structures across 3,000+ data points, proving my ability to align software logic with financial data analysis. Furthermore, managing high-throughput operations at Bullseye Lasertag with strict 15-minute turnaround schedules honed my capacity for resource optimization and operational delivery.

The Department of the Treasury's commitment to public stewardship and modernization deeply aligns with my career goals. I welcome the opportunity to discuss how my technical versatility, analytical background, and problem-solving mindset can add value to your team. Thank you for your time and consideration.

Sincerely,

Georgi Petrov
