Hiring Manager,
Enterprise Application Services
Office of Information Technology
New Brunswick, NJ

Re: Application Programmer (Posting #26ST1802)

As a current Rutgers IT Helpdesk Consultant actively supporting the university's technology infrastructure, I was excited to see the Application Programmer opening within the MaCS team. Having spent the past months resolving end-user anomalies across Microsoft Office 365, Active Directory, and Rutgers web services, I have gained direct insight into our university's IT ecosystem. Paired with my experience developing API-driven Python tools and administering virtualized systems, I am eager to contribute to OIT's cloud integration and automation initiatives.

My background aligns directly with the core technical and operational requirements of this role:

- **API Integration & Tool Development:** In my project work, I engineered *BoomFrame*, a Python desktop application that processes RESTful HTTP APIs and structured JSON data asynchronously. This hands-on experience with asynchronous data processing directly translates to building custom integration tools via vendor APIs such as Microsoft Graph and G Suite SDK.
- **Cloud & Systems Administration:** As System Administrator for the Rutgers Cybersecurity Club, I manage virtual machine clusters, firewalls, and network security environments using PowerShell and Bash. Complementing this, my front-line role at the Rutgers IT Helpdesk has sharpened my knowledge of MS Office 365 administration and positioned me as a reliable liaison between end-users, departmental IT, and Level-2 support teams.
- **Technical Communication & Problem Solving:** Translating complex technical solutions into clear, actionable guidance for faculty, staff, and students is a daily part of my workflow. I bring a patient, customer-first mindset alongside strong foundational skills in Python, shell scripting, HTML/CSS, and structured data formats.

I welcome the opportunity to discuss how my technical background and direct familiarity with Rutgers OIT workflows can add value to the EAS team. Thank you for your time and consideration.

Sincerely,

Georgi Petrov
